Summary of Visual Insights

- **Speech Timing is Paramount:** Pause duration latency (>600ms) and whether the customer explicitly states the amount are the top empirical differentiators of promise validity.
- **Rogue Agent interdiction:** Tele-agent TA013 's 24 fake PTPs are clearly separated from normal calling operations by zero-duration dropped calls.
- **Label Denoising:** Manual labels contain clear contamination (15 'genuine feasible' promises with INR 0 paid), confirming the necessity of deterministic payment verification.
